# **Summary**

### **Maximum-Weight Bipartite Matching**

- Weighted bipartite graph:  $G = (U, V, \mathcal{E})$ . (Edges have weights:  $w_{uv}$ .)
- Matching is a subset of edges without common vertices.
- Denote the matching by set  $S \subseteq \mathcal{E}$ .
- Sum of weights in matching  $\mathcal{S}$ :

$$f(\mathcal{S}) = \sum_{(u,v)\in\mathcal{S}} w_{uv}.$$

• Find matching S that has the maximum weight:

$$\max_{\mathcal{S}} f(\mathcal{S}).$$

## 

- Maximum matching:  $\max_{S} f(S)$ .
- Minimum matching:  $\min_{\mathcal{S}} f(\mathcal{S})$ .
- Maximum matching can be reduced to minimum matching by flipping the signs of weights.
- Algorithms that find the minimum matching can also find the maximum matching.

#### **Hungarian Algorithm**

- Hungarian algorithm finds a minimum-weight bipartite matching.
- It requires  $|\mathcal{U}| = |\mathcal{V}| = n$ .
- Time complexity:  $O(n^3)$ .
